

RMOD2000-EW Series / Plug & Play Mobility

2000W / Extra-Wide Input 180-950VDC

FEATURES

- High voltage DC/DC converter for E-Mobility
- Covering input voltage range 180-950VDC
- IP67, IP69, IP69K protection acc. to ISO 20653
- EN62477-1, ISO 6469-3, ECE-R10/100
- CAN J1939 interface
- High power density
- Excellent efficiency
- Base plate cooled or liquid cooled
- 2 years warranty

Dimensions (LxWxH): 316.0 x 254.0 x 83.0mm (12.44 x 10 x 3.27 inch)
6500g (14.33 lbs)

APPLICATIONS

SAFETY & EMC

DESCRIPTION

The RMOD high voltage families are On-Board DC/DC converter to generate the low voltage network (12/24V) from the vehicle's high voltage traction battery. The units are extremely robust plug & play modules and operates reliably even under the most adverse conditions. The ultra-wide input voltage range from 180V to 950VDC covers all battery voltages from nominal 250V up to 800V, which are commonly used in On- and Off-highway vehicles. Thanks to the excellent efficiency the unit is extremely compact and easy to implement via CAN-Interface to the vehicles Control-Network. The housing construction is waterproof and dust proof and the devices runs with base plate cooling or with water cooling. This solution is ideal for HV-battery powered electric vehicles "On- and Off-Highway E-Mobility Applications" such as Material Handling, Forklift trucks, Golf cars, AGVs, Loaders, Construction vehicles, Airport equipment, People mover, Special vehicles, Transporters, Tractors, etc.

In some applications the presence and correct fixing of input connector must be ensured before core start up the unit. To realize this function KL15 (Pin 3) can be connected in series with HVIL pins (Pin 1/2). In that way the converter will be in disable status until the input cable connection will be present. The following picture shows the connection described:

INSTALLATION & APPLICATION

Parallel Operation

Here the example of three parallel connected units. The connection of 3 units for power redundant or safety redundant or n+1 redundancy is possible. Parallel operation is possible due to implemented OR-ing Diode. Programmable current sharing via CAN communication.
